2	6
3	2

Consider the relations R and S shown above. Let $\pi^*, \sigma^*, \cup^*, \cap^*, -^*, \times^*$ denote the bag semantic versions of the relational algebra (RA) operators. Compute the results of the following RA queries.

1. $(\pi_C(R)) \cap (\pi_C(S))$
2. $(\pi_C^*(R)) \cap^* (\pi_C^*(S))$
3. $\delta(\pi_C^*(R))$
4. $\gamma_{B,C, \text{COUNT}(B,C) \rightarrow E}(R)$
5. $\tau_D(S)$
6. $\pi_{A \rightarrow F, B^2 + C \rightarrow G}^*(R)$
7. $R \overset{\circ}{\bowtie}_L S$
8. $R \overset{\circ}{\bowtie}_R S$
